Introduction

There are tons of blog articles, podcasts, and YouTube tutorials that teach you how to produce better tweets and posts on social media. You might have taken a handful of ideas and put them into practice.

How's that working out for you?

If you don't have the answer to this, you need to read on. We'll show you how to measure the return on the investment, the ROI, of your efforts on social media. We'll take a unique approach to this measurement -- instead of going channel by channel to explain best practices, we've organized our tips by what's most meaningful to businesses: audience, amplification, and conversion. These three categories seem to transcend which platforms you use. Thus, you can use these ideas to whatever measurable channels you use!

This ebook has been adapted from a series of articles that **Amanda Webb** has written for our blog. We are thankful for her expertise and delighted to share it here with you so that you can better measure your social ROI.

Let's get started!

Getting to Know Your Audience

Why do we constantly hear, even from established marketers, that you can't measure social media ROI?

After all, measuring the success of what we do online is quite manageable in comparison to the likes of newspaper, TV or radio ads.

In this first article, let's look at just one aspect of measurement -- your audience. **Namely, how do you know if you are reaching the right people and how active are they in comparison to your competitors?**

What To Measure

Before you decide on your measurement plan you need to define your goals.

In this post, we are looking at community measurement. Thus, your goals will revolve around the size of your audience, how interactive they are, whether they are a good fit for your business and how they measure up to your competitors audiences.

You'll also need to define your ideal customer so that you can see if your audience matches them.

Here's what we specifically recommend keeping track on:

- Number of fans/followers
- Number of fans/followers that match your target market
- Number of competitors' fans/followers
- Weekly audience growth v. competitors
- Weekly audience interaction v. competitors

Community Engagement

If you are starting from scratch, community building is key. This not only refers to the size of your audience but how much they interact with you.

It can be hard to set yourself a realistic goal at the outset. One method is to benchmark yourself against your competitors. You may not be able to reach their audience size immediately, but keep an eye on how quickly their audience is growing and how much interaction they are getting from their audience.

Analyzing Your Facebook Audience

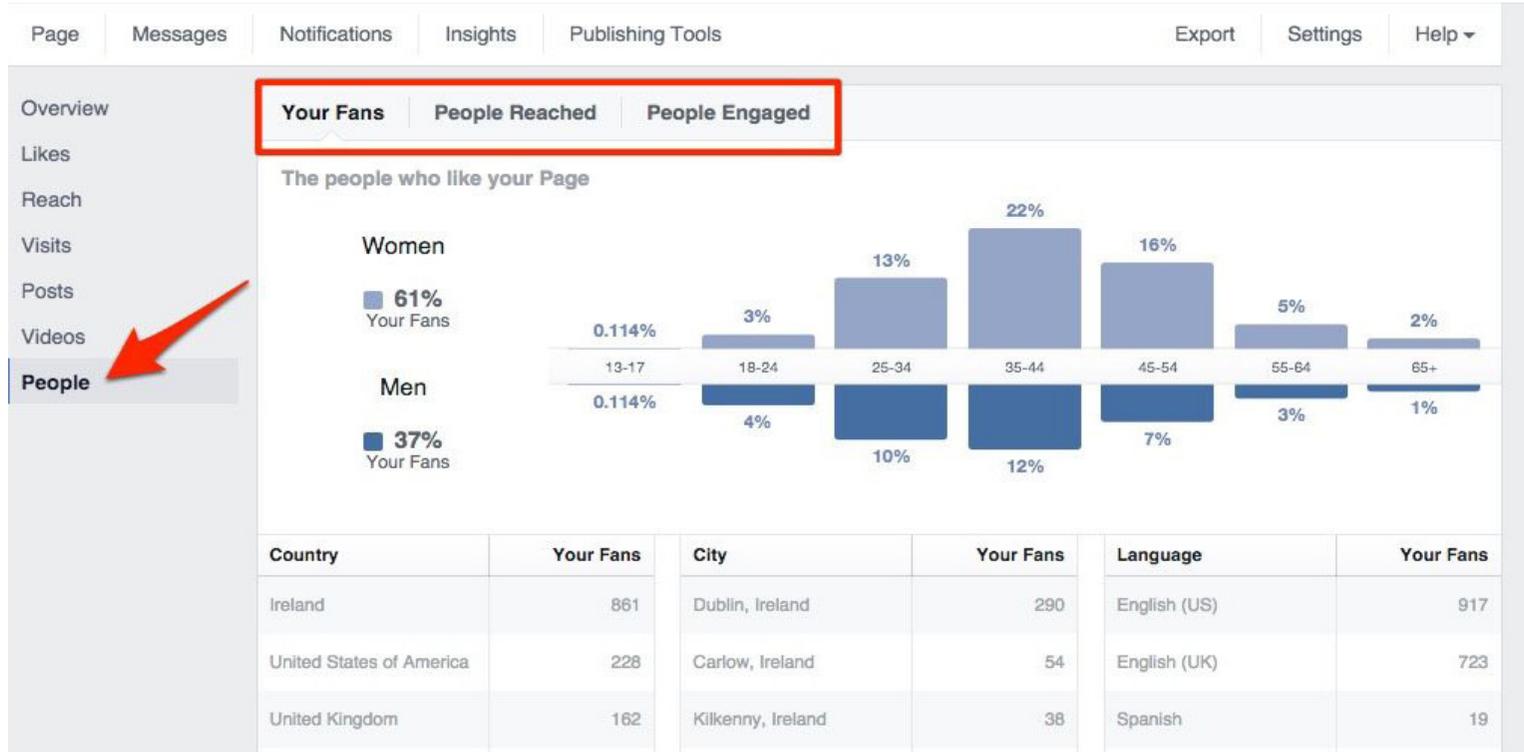

Finding out more about your Facebook audience is easy. Facebook knows a great amount about its users so it can tell you a lot about them.

Facebook Insights

Facebook Insights gives you a good overview in the 'People' tab. From here you can see demographics about your audience including, age, gender and where they live.

This will instantly tell you if you are reaching the right audience. You can flick between 'Your fans', 'People reached' and 'People engaged'.

The 'People reached' and 'People engaged' in some ways is more important than 'Your fans'. We can get very excited when our posts go viral but a quick look at 'People reached' will tell us if the people who saw our post had any relevance to our business.

Do you want to benchmark your Facebook following versus those of your competitors? Facebook Insights has a pretty cool feature that allows you to add pages to watch to your dashboard. Scroll down to the bottom of the main Insights page to add them.

From here you will be able to see:

- Audience growth
- Number of posts published
- Number or reactions, comments and shares they have received

Pages to Watch

Compare the performance of your Page and posts with similar Pages on Facebook.

[Add Pages](#) ■ Reactions, Comments & Shares

Page	Total Page Likes	From Last Week	Posts This Week	Engagement This Week
1  Spiderworking.com	1.8K 	▲0.1% 	13	28 
2 	829 	0% 	2	1 
3  We Teach Social	739 	▲0.4% 	0	0 

In the 'Posts' section of your Insights you can view the 'top posts from pages you watch'. If the pages you watch are similar to your own, you will be able to gauge what sort of content works well for your audience from here.

Page | Messages | Notifications | Insights | Publishing Tools | Export | Settings | Help ▾

Audience Insights

For a more detailed insight into your Facebook Likes use 'Audience Insights'. These live in your Ads Manager.

Click 'Tools' at the top of your ads manager page and select 'Audience Insights' from the drop down menu.

The screenshot displays the Facebook Ads Manager interface. At the top, there are navigation tabs: 'Manage Ads', 'Account Settings', 'Billing', 'Power Editor', and 'Tools'. The 'Tools' dropdown menu is open, showing options: 'Audiences', 'Audience Insights', 'Pixels', 'Custom Conversions', 'Pages', 'Image Library', 'App Ads Helper', and 'Advertiser Support'. A red arrow points to 'Audience Insights'. Below the navigation, the account name 'Account: Amanda Webb' is visible. A red warning banner states: 'European Union Customers: Facebook needs to ensure your tax information is up to date in order to provide you with the best experience. Please take a moment to update your VAT information.' Below the banner is a bar chart titled 'Spent Last 7 Days:' showing spending for dates 10/6, 10/7, 10/8, 10/9, and 10/10. The bars for 10/6 and 10/7 are blue, while the others are grey.

Select 'People connected to your page'

The screenshot shows the Facebook Ads Manager interface. A dialog box titled "Choose an Audience to Start" is open, offering three options: "Everyone on Facebook", "People connected to your Page", and "A Custom Audience". A red arrow points to the "People connected to your Page" option. The background shows the "CREATE AUDIENCE" sidebar with filters for Location (United States), Age and Gender (Age: 18+, Gender: All), and Interests. A "Lifestyle" table is visible at the bottom.

Lifestyle	Selected Audience	Compare
Rural Parents	2%	+0%
Hard Chargers	1%	+0%
Savvy Singles	4%	+0%

Select 'People connected to your page' to find out more about them.

Facebook will add a default location on the left hand side. Get rid of this if you want to know about your entire audience, not just those based in a specific location.

The screenshot shows the Facebook Audience Insights interface for a 'New Audience' of 1.6K monthly active people. The interface is divided into a left sidebar and a main content area.

Left Sidebar (CREATE AUDIENCE):

- Account: Amanda Webb (3...)
- Buttons: Create New, Open, Save, More
- Green button: Create Ad
- Section: **CREATE AUDIENCE**
- Custom Audience: >
- Location: [Dropdown menu]
- Age and Gender: [Dropdown menu]
- Age: 18 - Any
- Gender: All, Men, Women
- Interests: [Dropdown menu]
- Connections: [Dropdown menu]
- Pages: [Dropdown menu]
- People Connected to PLACE: Spiderworking.com, + Your Page
- People Not Connected to: + Your Page
- Advanced: >

Main Content Area:

- Section: **(New Audience)** 1.6K monthly active people
- Radio buttons: (New Audience) | People on Facebook
- Demographics tabs: Demographics (selected), Page Likes, Location, Activity, Household, Purchase
- Section: **Age and Gender**

Self-reported information from people in their Facebook profiles. Information only available for people aged 18 and older.

65% Women (45% All Facebook)

35% Men (55% All Facebook)

Age Group	Women (%)	Men (%)
18 - 24	0%	15%
25 - 34	20%	35%
35 - 44	40%	35%
45 - 54	30%	15%
55 - 64	10%	0%
65 +	0%	0%
- Section: **Lifestyle**

US demographic and interest data based on purchase behavior, brand affinity and other activities. Source: PersoniX.

[Information icon]
- Section: **Relationship Status**

Self-reported data from people who list a relationship status on Fa...
- Section: **Education Level**

The highest level of education reached based on self-reported dat...

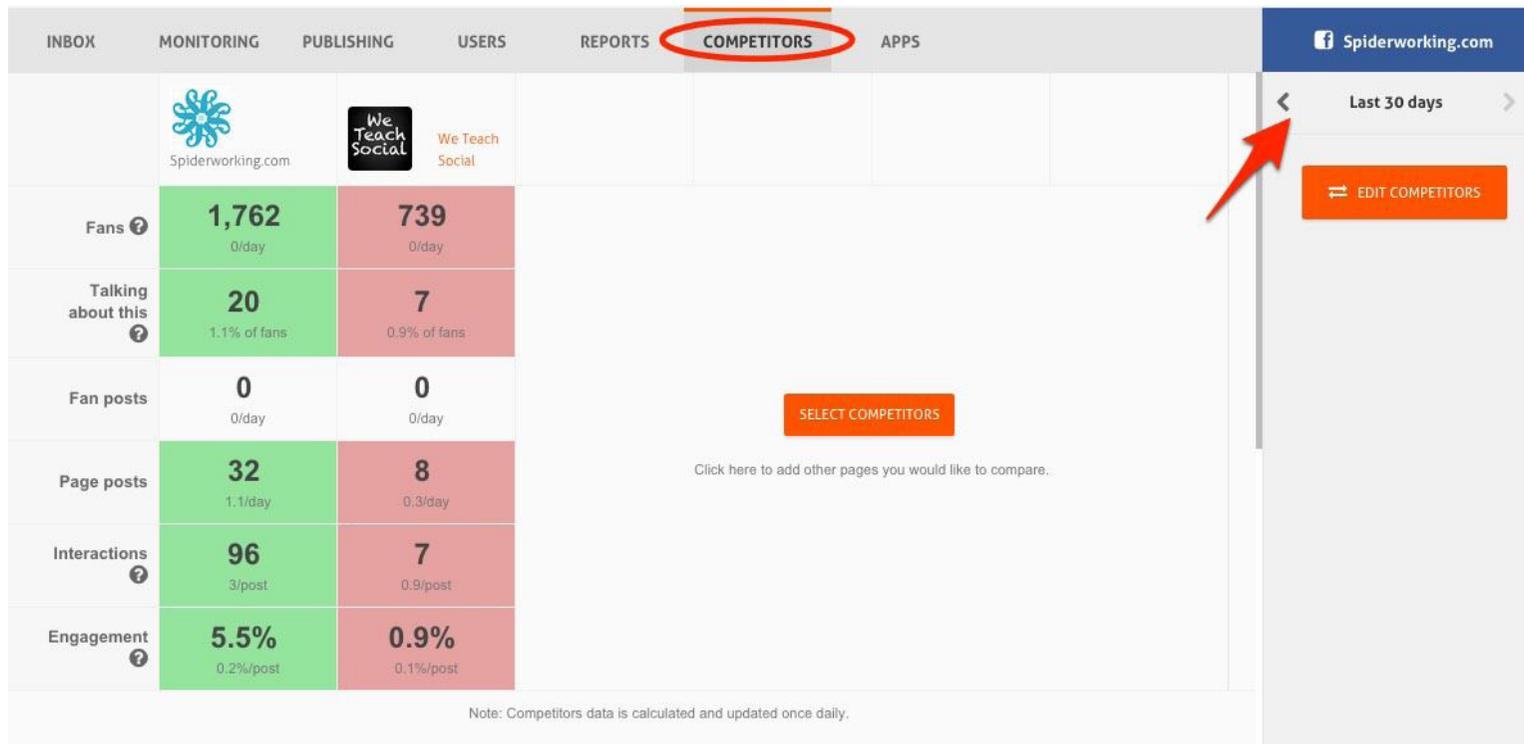

Two red arrows point to the 'Location' dropdown menu and the 'People Connected to PLACE' section in the sidebar.

From here you can see not just demographics but, depending on your location and size of audience, information about their relationship, education, the pages they like, where they live, their Facebook activity, their household and their purchasing.

This will give you a far better idea if your audience consists of the right people and what else they do on Facebook.

Other Tools

If the phrase “Facebook Insights” gives you the chills, there are a number of handy tools that can give you a clearer understanding of your social audience.

For example, Agorapulse offers you additional benchmarking stats in its “Competitors” tab.

From here you can see, among other statistics:

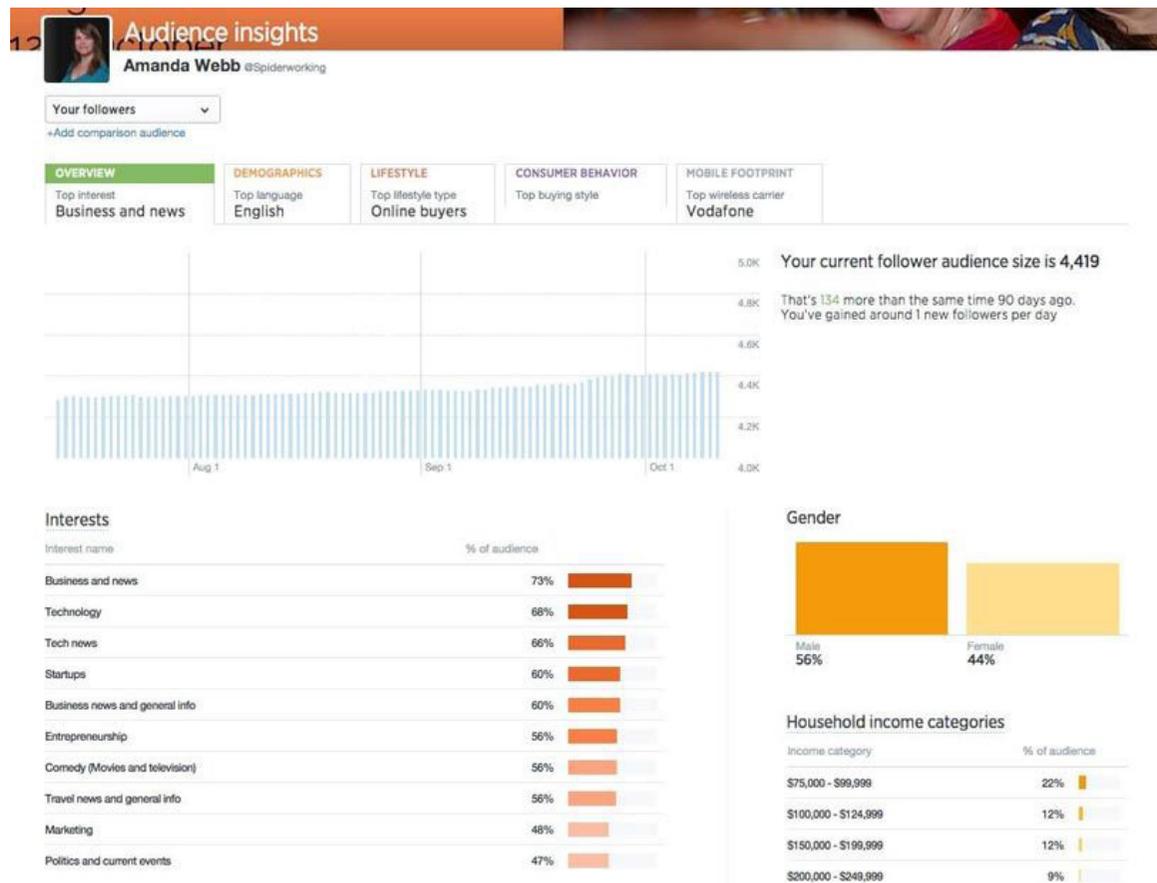

- Total number of fans and how many new fans per day
- Number of posts by fans and how many posts per day that represents
- Number of page posts and posts per day
- Number of interactions (likes/comments/shares) and interactions per post
- Engagement rate (percentage of your fans that engage with your posts) and engagement rate per post

Analyzing Your Twitter Audience

Twitter Analytics

Twitter knows less about its audience but it's always improving. Twitter's own analytics will show you a detailed break down of your followers including gender, interests and household income.

You'll find this information under the 'Followers' tab on your analytics dashboard.

Twitter audience insights gives you detailed information about your followers.

Other tools

Twitter analytics gives you a wide view of your followers. You can use third-party tools **Agorapulse** to find the really important people. Those who share links to your website and those who retweet your content on a regular basis. We call these people ‘Ambassadors.’

To find out who these people are select your Twitter account from the Agorapulse dashboard. Click the ‘Users’ tab in the top menu bar and then click on the bullhorn icon.

Click ‘view’ and you can see recent interactions and RT’s and website mentions from that user. You’ll be surprised to see how many times ambassadors have shared your website content.

The screenshot displays the Agorapulse interface. On the left, a list of followers is shown with their profiles, bios, and follower counts. The right-hand panel provides a detailed view of a selected user, Sarah Eggers (@hidama). This panel includes options to 'UNFOLLOW' or 'FLAG' the user, and a 'VIEW' button. Below these are tabs for 'INFO', 'DIRECT MESSAGE', 'RECENT INTERACTIONS', and 'RECENT MONITORING'. The 'RECENT INTERACTIONS' and 'RECENT MONITORING' tabs are highlighted with red boxes. A direct message input field is visible, showing a conversation with @hidama. The message content is: '@Spiderworking You're welcome! Looking forward to the podcast to see what other advice is out there!' with a timestamp of 5/6/16 12:46 PM. A 'SEND' button and a character count of 132 are also present.

Now you have identified your brand ambassadors on Twitter put them on a Twitter list so that you can interact with them frequently and build a stronger relationship.

If you're looking to benchmark your followers against your competitors, try their latest free benchmarking tool.

Enter your username and that of your competitors and within a minute you'll get this useful grid about how well your audience stacks up.

Using the last 30 days of data, the "Audience" tab tells you both the quantity and the quality of your followers. The first column gives you the sheer number of how many people are following you. The second column tells you the average number of retweets and followers per user -- a great way to determine how active your followers are.

Other useful tools to analyze your Twitter following include *Followework* and *Klear*.

What Should You Do With This Information?

The first thing you need to do is monitor the information you gather regularly. Keep a spreadsheet with your key statistics and watch them grow. Keeping an eye on your competitors will inspire you to do better and keep your motivation going.

The big question is are you reaching the right people with your social media? After taking a close look at your audiences are they a good sample of your customers and those who influence your customers?

If the answer is no, you have a lot of work to do. You will need to adjust your content strategy and advertising campaigns to attract more of the right people. By keeping an eye on these statistics over time, you should see an increase in the number of relevant people.

If you are reaching the right people you can give yourself a pat on the back before you adjust your content schedule to be even more relevant to your audience.

Once you have all that in place, you'll want to see how well your audience shares your relevant content. That **amplification** is what we'll track in the next chapter.

Measuring Your Audience's Amplification

In our last chapter, we learned how to measure your audience. Now we'll look at the best ways to measure the amplification of your messages.

Amplification is a fancy word for shares. When people share your content they are amplifying it, showing it to an audience that you may not reach on your own.

Amplification is similar to word-of-mouth marketing. People may not be endorsing you directly, but they are spreading the word about you when they share your content.

The value of amplification doesn't just lie in the number of shares but also in who is sharing it and how much they influence your buyers.

What You Should Measure?

As you will see later on, there are lots of metrics that you can measure but the key ones for amplification are:

- Number of social network shares of your posts
- Number of social network posts linking to your website
- Number of shares from social buttons on your website

Measuring Twitter for Amplification

Twitter Analytics

From the analytics dashboard, click on 'Tweets' in the top menu bar.

To dive deeper into these statistics, download a CSV file by clicking 'export data' at the top right-hand side of the screen.

over this **28 day** period

Export your data to delve deeper into your analytics.

Open this file in Excel and you start examining the data in more detail.

First, sort results by retweets and link clicks.

To easily see the retweets related to your business, highlight any pointing to your properties. These include your websites or YouTube channel.

One tweet stands out: it only received one retweet but generated 7 clickthroughs.

impressions	engagements	engagement rate	retweets	uri clicks	hashtag clicks
643	25	0.038880249	3	3	2
292	23	0.078767123	3	3	0
441	12	0.027210884	3	1	0
417	7	0.016786571	3	1	0
1010	12	0.011881188	3	0	0
162	2	0.012345679	2	0	0
286	8	0.027972028	2	0	1
429	4	0.009324009	2	0	0
463	8	0.017278618	2	0	0
1668	13	0.007793765	1	7	0
329	11	0.03343465	1	1	1
220	11		1	3	0
466	5	0.01072	1	2	0
290	3	0.0104828	1	2	0
263	6	0.022813688	1	2	0
476	4	0.008403361	1	2	0
453	5	0.011037528	1	2	0

Time to look at this tweet in more detail.

Of course the number of clicks may not correlate to that user at all. Perhaps the wording of the tweet was effective, or perhaps it was the hashtags used. Even so, it's worth putting that person on your influencers list. The tweet reached 1,668 users as a result of both the original tweet and his retweet.

It's not just clicks to your own website that are important. Anything that you tweet that gets shared is adding to brand awareness and the amplification of your message.

The tweet above got the most link clicks out of all the retweets but the second most clicked tweet also only got one RT. Interestingly, it also reached far fewer people. Whereas that first tweet we talked about reached 1,668 people, the second one only reached 329.

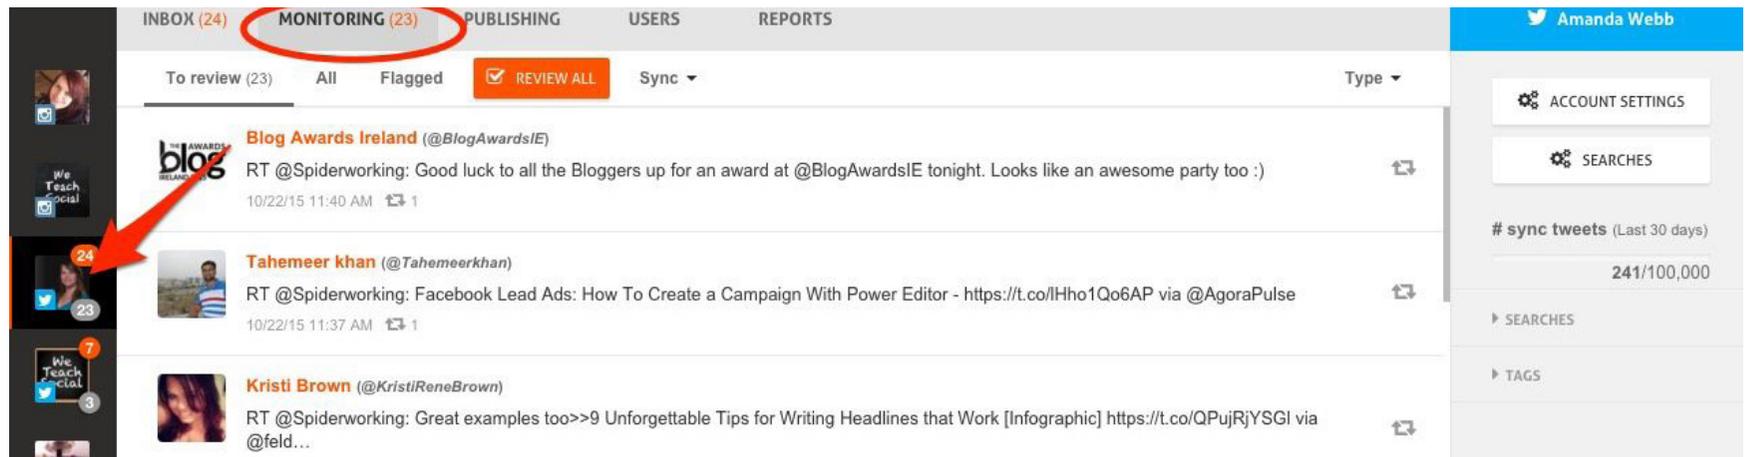

Perhaps this tweet was popular because of the wording and timing of the tweet rather than the power of the retweet. This tweet relates to a campaign from a charity. Perhaps we should all be more charitable in the future, huh?

Other tools

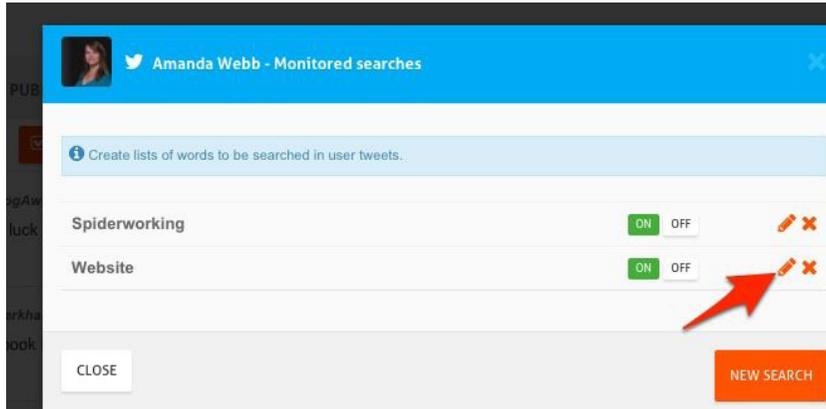

Twitter analytics tells you about retweets. But what do the analytics tell you about people who share links to your website that don't retweet or include your username? To find out how many people are sharing links to your website, try a third-party tool like Agorapulse.

Simply on your Twitter bio on the left-hand side and select 'Monitoring'.

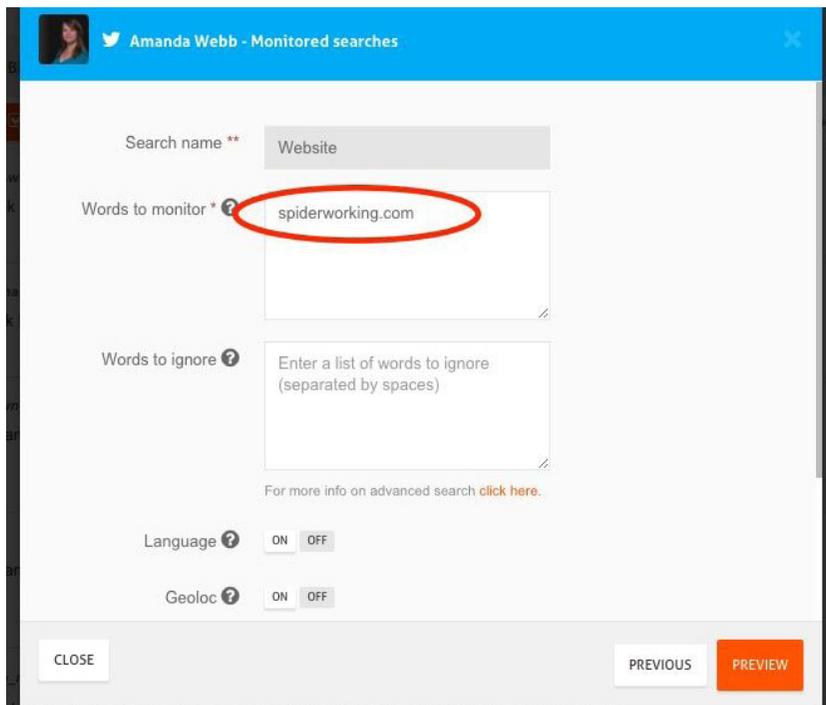

To set up a search for mentions of your website click 'Searches' on the right-hand side navigation bar.

When a window appears, click the pencil next to 'Website.'

Now enter the name of your website (no need to add the http:// or the www.) and save.

Once you have set this up, any tweets linking to your website will appear in the monitoring tab.

Measuring Facebook For Amplification

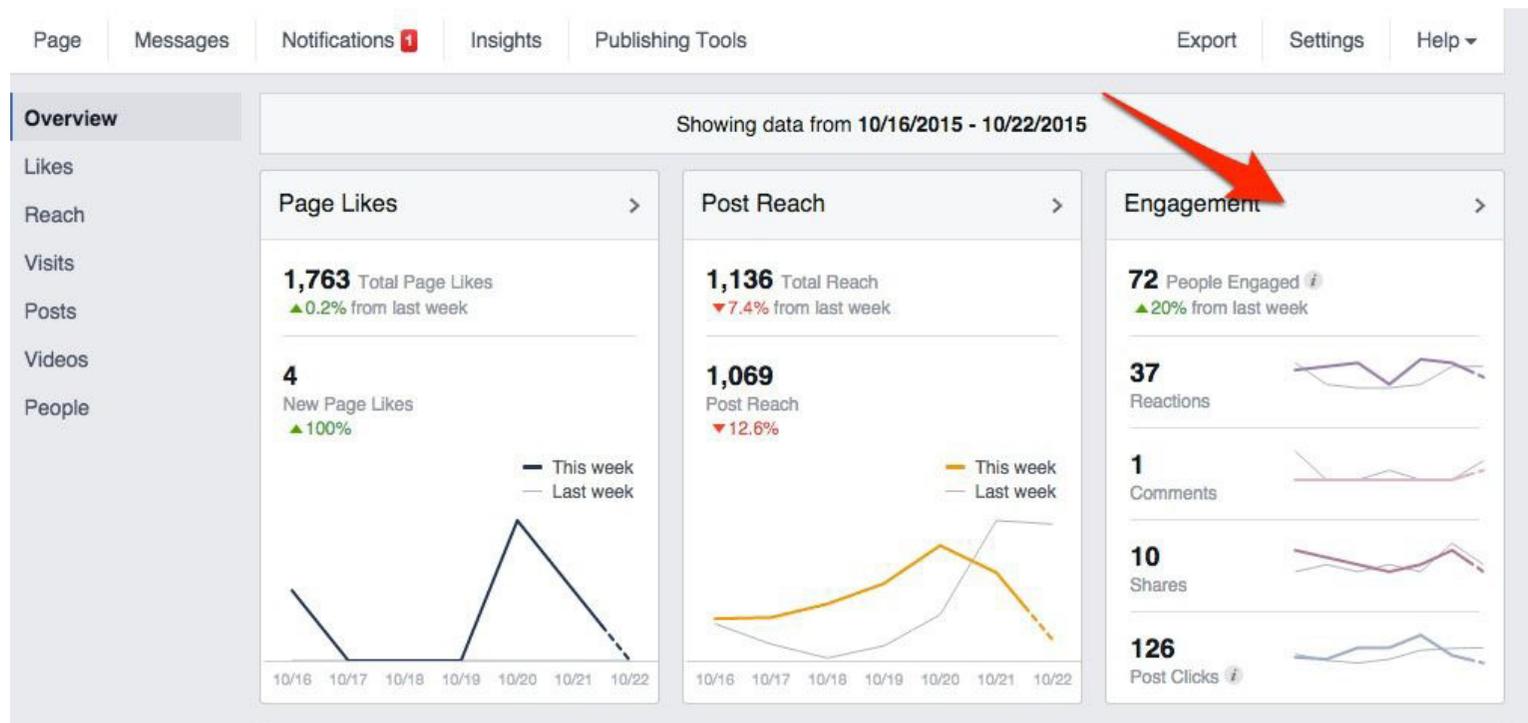

It's harder to measure Facebook than Twitter as many Facebook users keep their profiles private.

It can even be hard to find public posts that share your content. Facebook search doesn't always produce the results we expect.

Facebook Insights

Facebook Insights will show you how many people have shared content from your page over a set period of time.

Click on 'Engagement' from the dashboard.

Next, select 'Shares' from the 'Like Comment & Shares' menu.

You can download a report to delve deeper. Click 'Export' at the top of the Insights window. And select 'Post Data'. This will give you an Excel document.

As we are interested in shares, select the 'Lifetime talking about this' tab from the document.

As with the Twitter export, sort the result by 'shares', "comments" and 'likes'. Highlight any content that you have created from the list.

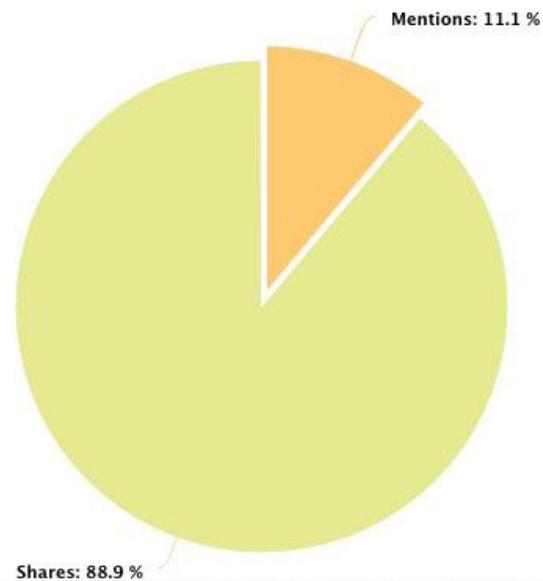

This shows you not only the number of shares but how many of these are on your own content.

As with Twitter, you can investigate your most shared post to see who shared it.

Other tools

The nice visual reporting in Agorapulse makes it much easier to get an overview of how 'viral' your page is. Select your Facebook page from the sidebar and click the 'Reports' tab at the top of the page. Now select engagement.

Use Agorapulse to find out how many people are mentioning and sharing your Facebook page and post.

Straight away you can see that there are 9 public posts published about your page by Facebook users in the last 30 days. This includes 8 shares and 1 mention.

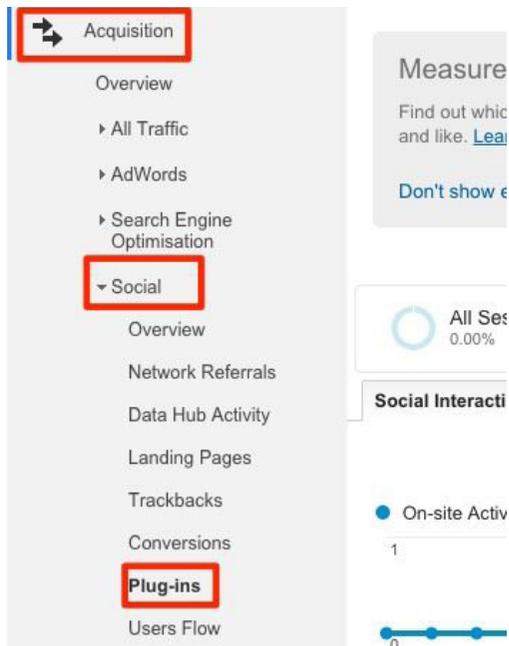

Scroll down a bit and you can see which public profiles were responsible for that amplification.

Measuring Your Website For Amplification

To discover how many social shares you have had from your Website, you'll need to pay a visit to your Google analytics dashboard.

Google Analytics

Select 'Acquisition/Social/Plugins' to see how many people have clicked your share buttons.

BuzzSumo is another great tool to check social shares from your Website.

What To Do Next

Add the metrics that are relevant to you to a spreadsheet and track them weekly or monthly to assess your growth over time.

If you find positive trends in your most shared content, look at creating similar posts in the future.

What kind of leads is your business or client getting from this amplification? We'll explore how to measure those opportunities in the next chapter.

Tracking Your Leads From Social Media

Do you regularly measure your Website conversion based on referrals from your social media outposts?

You know you should. So let's learn how to do it.

Measuring Traffic To Your Website

Google Analytics

It's always satisfying to log into Google Analytics and see the amount of traffic coming into our sites. But when we break down these statistics, we often find that some traffic sources are more valuable than others. Google Analytics allows us to track the amount of social traffic coming to our websites but it also allows us to evaluate it.

How to find out how much traffic Social Media is sending to your site.

(To find this information, you must have Google Analytics installed on your website.)

- Log into the dashboard.
- Click the 'Acquisitions' tab on the left-hand side of the screen.
- Select 'Social' and then 'Network Referrals.'

The example below is from my own site. As you can see, Facebook drives the most traffic to my site but it's

the traffic that comes from Twitter that stays the longest spending over double the amount of time on site as Facebook users.

They also look at slightly more pages than visitors from any other social site.

Social Network	Sessions	Page Views	Avg. Session Duration	Pages/Session
1. Facebook	488 (68.64%)	676 (68.77%)	00:01:39	1.39
2. Pinterest	94 (13.22%)	107 (13.85%)	00:00:22	1.14
3. Twitter	78 (10.97%)	131 (13.33%)	00:03:28	1.68
4. LinkedIn	43 (6.05%)	61 (6.21%)	00:01:15	1.42
5. YouTube	5 (0.70%)	5 (0.51%)	00:00:00	1.00
6. Blogger	1 (0.14%)	1 (0.10%)	00:00:00	1.00

This suggests I should spend more time and advertising on Twitter than I do already.

To delve deeper, add a secondary dimension to these statistics.

Primary Dimension: Social Network

Secondary dimension

Secondary Dimension	Sessions
1. Experiment ID	488 (68.64%)
2. Experiment Name	488 (68.64%)
3. Full Referrer	94 (13.22%)
4. Hostname	94 (13.22%)
5. Landing Page	78 (10.97%)
6. Landing Screen	43 (6.05%)
7. Page	5 (0.70%)
8. Page Depth	5 (0.70%)
9. Display as alphabetical list	1 (0.14%)
10. Google+	1 (0.14%)

In the example below I have chosen 'Landing page.' This shows me the blog posts that have driven the most traffic.

Social Network [?]	Landing Page [?] [✕]	Sessions [↓]	Page Views	Avg. Session Duration	Pages/Session
1. Facebook	/blog/2015/10/27/like-and-share-facebook-rea ch/index.html [🔗]	118 (16.60%)	147 (14.95%)	00:00:50	1.25

Keep a note of these posts as you can share them again on your social networks driving more traffic.

Once other insight that this report gives me is that my Pinterest traffic is very bouncy. Even though Pinterest is driving traffic to one specific post, it looks like it's not staying very long.

Having flagged this problem I looked at the image that was driving this poor quality Pinterest traffic. This image was driving lots of traffic but wasn't delivering what people expected when they arrived on site.

As you can see I'd used a generic image. This would drive clickthroughs but wasn't delivering what Pinterest users expected when they arrived on my site.

Armed with this information, I'm now creating more Pinterest friendly images that include the headline of the post on the image. I'm hoping this will have a positive effect on the traffic I get from there in future.

Google URL Builder

I recently ran a set of ads on Facebook pointing at a landing page on my website. As always I created two Ad Sets: one aimed at people connected to my page, the other at people who weren't.

I had installed a conversion pixel so I would know if the ads drove sales (more on this later). I noticed early

How To Write Great Social Media Bios, Clever Instagram Case Studies & More – The Social 7

Posted on March 1, 2014 by Amanda Webb | 0 Comments

This week I've been doing lots of research so there's a mix of old and new links in my roundup. I've included some really clever uses of Instagram for tourism, the story of a business that had incredible success with a Facebook contest and some tips on blog commenting.

on that the non-connected ads were getting more clickthroughs than the connected ad. I was interested to see if this was valuable traffic even if it didn't convert so I created a tracking link so I could identify them in Google Analytics.

Now that the tracking link was in place, I could find out more about the site visitors coming from this ad set. You can do the same.

- From your Google Analytics dashboard select 'Behavior/Site Content/All Content.'
- Click on the name of the landing page for the ad.
- Choose 'Source/Medium' as a secondary dimension. There you'll easily see the traffic driven by those ads.

See what happened (above) in my case? Although the bounce rate was high, this was to be expected. We created a dedicated distraction free landing page for the ads -- so if you didn't buy there wasn't anywhere

Page	Source / Medium	Pageviews	Unique Pageviews	Avg. Time on Page	Entrances	Bounce Rate	% Exit
		206 % of Total: 10.72% (1,922)	188 % of Total: 11.85% (1,587)	00:02:14 Avg for View: 00:01:59 (12.85%)	168 % of Total: 14.85% (1,131)	91.07% Avg for View: 76.13% (19.63%)	85.44% Avg for View: 58.84% (45.19%)
1. /index.php/blogg...e-learning-cou...rse/	facebook / facebook ads	107 (51.94%)	97 (51.60%)	00:01:02	96 (57.14%)	94.79%	89.72%
2. /index.php/blogg...e-learning-cou...rse/	(direct) / (none)	34 (16.50%)	29 (15.43%)	00:01:30	25 (14.88%)	80.00%	70.59%
3. /index.php/blogg...e-learning-cou...rse/	bitly.com / referral	17 (8.25%)	16 (8.51%)	00:06:16	11 (6.55%)	90.91%	82.35%
4. /index.php/blogg...e-learning-cou...rse/	t.co / referral	17 (8.25%)	16 (8.51%)	00:07:00	16 (9.52%)	87.50%	88.24%
5. /index.php/blogg...e-learning-cou...rse/	facebook.com / referral	9 (4.37%)	9 (4.79%)	00:02:47	5 (2.98%)	100.00%	88.89%

much else to go. Interestingly the bounce rate was lower than from people who visited from Facebook organically.

Google URL Builder is also useful for measuring traffic to your site from Instagram which at the moment appears as 'Direct' in your Google Analytics.

Bitly.com

Bitly is one of my favorite measurement tools. I don't always have time to rifle through my Google Analytics, so Bitly makes it quick and easy to see how many people are clicking my links.

From the Bitly website you can shorten a link, share it on your social media channels and then measure the results.

Bit.ly breaks down your link clicks by source. In the example below, you can see that Facebook was the best social referral site for this particular link, distantly followed by Twitter.

Bitly is a quick way to measure where link traffic is coming from.

WHERE THIS BITLINK WAS SHARED

One neat trick with Bitly is to combine it with your Google tracking links. If you create more than one tracking link to the same web page, you can create a unique Bitly for each one.

Measuring Leads

What is a lead?

For the purpose of this chapter, a lead is someone who makes an inquiry through your website or social site or signs up to you opt-in email list.

Email subscribers

Using Google Analytics you can measure the number of people that subscribe to your opt-in list on your website.

To do this, you will need a dedicated thank you page that you send people to once they have subscribed. Measuring traffic to this page is the key to discovering how many subscribers came from social channels.

Find your Thank You page under 'Behavior/Site Content/All Pages' on Google Analytics as before. This time, choose 'Referral Path' as your second dimension. This will show you where the traffic that arrived at this page originated.

Page	Referral Path	Pageviews	Unique Pageviews
		12 % of Total: 0.62% (1,922)	5 % of Total: 0.32% (1,587)
1. /index.php/thank-you-for-booking/	(not set)	7 (58.33%)	2 (40.00%)
2. /index.php/thank-you-for-booking/	/a/bitlinks/1QIK43J	3 (25.00%)	1 (20.00%)
3. /index.php/thank-you-for-booking/	/blogging-for-success/rules-of-bloggi ng/	1 (8.33%)	1 (20.00%)

Now you will be able to see how many subscribers came from social channels and how many from other sites.

As long as visitors are sent to a unique Thank You page on completion of a form, you can repeat this process for any contact or inquiry forms on your website. You can even measure the source of traffic to check-out pages on your site.

The Facebook Conversion Pixel

Install the Facebook Pixel on your site and you can ask Facebook to track conversions that occur as a result of your ad. A conversion could be a checkout, a download or an email subscribe.

As with the Google Analytics method above you will need to have a dedicated Thank You page. It is visits to this page that will trigger the pixel.

Back Review Order Place Order

The most obvious way to do this is to set up a 'Website Conversions' objective when you create your ad -- but you don't have to stop there. You can add conversion tracking to any ad you create that points at your website.

In Ads Manager you will find this option in the creative section (see below). This will come in particularly useful if you have an eBook download or an email subscribe on your site.

Twitter conversions

Twitter ads also offer a conversion pixel. To set them up click on 'Tools' at the top of the advertising dashboard and select 'Conversion tracking' from the drop down menu.

As with Facebook ads you can set up ad campaigns with the specific objective of converting users. You can also measure conversions that happened as a result of any ad you run.

The report below shows conversions that resulted from an engagement campaign we ran. Our conversion pixel measures traffic to our website. What's interesting about this is that the ads we ran didn't contain any links to our website. It's encouraging to know that people are still converting even if that's not our key objective.

What's next?

Now that you have learned the techniques to measure your social media success, you need to create a measurement plan. Here are some must-haves to include:

- Decide what metrics you are going to measure.
- Create a spreadsheet document to measure growth over time.
- Review your metrics, add or stop measuring others depending on your goals.

You will find that having a social media ROI measurement plan in place will help inform your content and make achieving goals easier.
